## RCD Technology Windshield Label Instructions

RCD Technology's durable and highly reliable vehicle windshield tag is the ideal solution to optimize your automotive asset management operations. Our innovative RCDSecure™ antenna solution self-destructs and renders the windshield tag useless if tampered with or removed. It is important that the below instructions are followed to ensure the chip is not damaged when the label is removed from the release liner.

- 1) **DO NOT** remove the label from the release liner by pulling left to right or right to left. This could damage the chip's connection with the antenna or the antenna.

- 2) Roll release liner away from the top of the label around your index fingers while gently using your thumbs to guide the top of the label off the release liner. This can also be done by rolling the release liner around the edge of a sturdy clipboard or binder while guiding the label to release.
- 3) Once the chip is cleared of the release liner it is safe to remove the label.
- 4) If you feel that you may have damaged the chip, discard the tag
- 5) Apply the label to the windshield in the desired location – do not remove once in place
- 6) The full affect of the tamper evident feature requires 30 minutes of set time on the substrate.
