

# Sentry Asset Tags

## FEATURES

- Sentry-M is designed and optimized for on-metal applications
- Sentry provides excellent read ranges on most surfaces
- Read range and read accuracy optimized for rack-mounted and stacked IT equipment
- Meets FSTC performance recommendations for Data Center Asset Tracking
- Sentry M-WW is designed to perform across the full 860 - 960 MHz band

## BENEFITS

- Enables efficient, optimized and automated asset management
- Enables more frequent inventory counts
- Increases accuracy of inventory counts
- Increases security and protects brand equity
- Achieves regulatory compliance

## INDUSTRIES

- Financial services
- Banking
- Enterprise companies
- Healthcare companies and networks

## UNMATCHED INNOVATION

RCD's patent pending Sentry asset tracking tags are specifically designed to provide visibility into your business assets; Assets which define your competitive advantage and business efficiency. All of which need tracking to increase utilization and compliance and reduce risk. Engineered specifically for optimal read ranges and efficiency when attached to IT equipment including racks, servers, computers, and other IT assets, the Sentry Tags provide the right technology, and the right performance.

## A FAMILY OF TAGS FROM WHICH TO CHOOSE

The Sentry family of UHF Gen 2 Passive RFID tags from RCD is a new breed of asset management tool. The Sentry-M and Sentry-M Slim tags are specifically designed for superior performance when attached to metal assets.

RCD's latest mount on metal offering is the Sentry M-WW, a broadband tag that reads across the full 860 - 960 MHz spectrum, meeting the FSTC guidelines in the European, North American and Japanese frequency bands. It is perfect for source tagging IT equipment that will be shipped around the world.

For environments with a mixture of surfaces, the Sentry tag is an excellent all-round tag providing 7' read ranges on most surfaces.

## SUPERIOR PERFORMANCE

Whether it's extended read ranges of 12' to 15' (4 - 4.5 m), 860 - 960 MHz broadband sensitivity, multi-surface uses or additional user memory, RCD's Sentry Family of asset tags allow you to choose the product with the features necessary so your data center inventory processes will achieve maximum, accurate automation.

All Sentry products feature 512 bits of user memory which allows you to maintain maintenance histories, operational characteristics and specifications which you define, directly on the tag, where they should be. RCD will also be your Service Bureau, providing tag programming, barcode and human readable data labels.
